

E-Z OFF/CARCASS DROP

Controls the Carcass from Rail to Block

Why wrestle with heavy, hard-to-handle beef quarters or hog carcasses in the cutting room? Increase safety and slash costs in half with the all-new **E-Z OFF CARCASS DROP**. This unit does all the hard work, allowing one man to handle, lower and unload up to 400 lbs. without help.

E-Z OFF is designed for all types of meat processing installations. It's ideal for lowering from a high rail to a cutting block or to a lower rail. With its foolproof mechanical brake, every movement is under control.

Your operator can control the descent and stop the trolley at any height for convenient unloading.

A safety stop holds back waiting trolleys while the carcass drop is in use. A spring rewinds the drop chain automatically when the trolley is unloaded and the brake is released. These features, plus the easy operation and sturdy construction featured on the opposite page, make the **E-Z OFF CARCASS DROP** an ideal solution for your operation.
